Field Notes Service Guide

Field Notes is a fictional note-taking service used to test how paragraphs are extracted from PDF files. Notes can be shared with co-operating teams, and every account has a support code such as 123-456 printed on the invoice.

Before installing, check that your device has at least 2 GB of free space - (see the table in the appendix) and a stable network connection.

Installation

- Download the installer from the example site.
- Run the installer and follow the steps on the screen. The setup may take a few minutes on older devices.

(a) Sign in with your account.

1) Choose the folders to sync.

The service keeps deleted notes for thirty days. After that, they are removed permanently and cannot be restored by the support team.

Backups are created every night.

Contact the support team at support@example.com if you need help with your account.

All names in this guide are fictional.

Appendix: Sync Limits

Each account can sync up to five devices at the same time. Older devices may need an update before they can sign in.

Large attachments are uploaded only on Wi-Fi to save mobile data.
